

Project Design Phase-II
Data Flow Diagram & User Stories

Date	6 April 2026
Team ID	SWTID-2026-9601
Project Name	Smart library request workflow
Maximum Marks	4 Marks

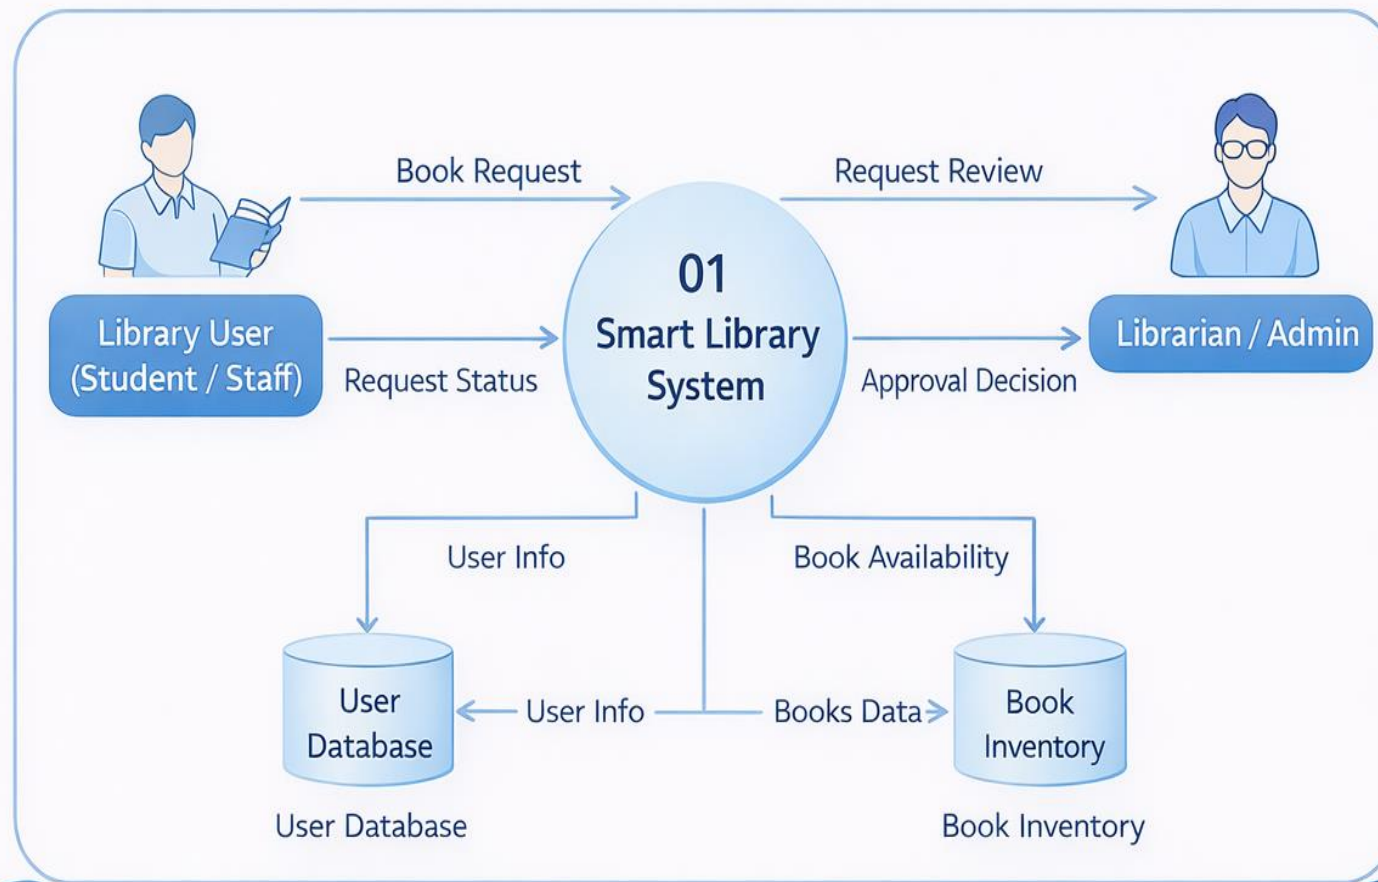

Data Flow Diagrams:

A Data Flow Diagram (DFD) represents how data moves within the Smart Library Request Workflow system. It shows the interaction between the user and the librarian along with the processes involved in handling a book request. In this system, the user submits a request for a book, which is then validated by checking user details and eligibility. The system verifies the availability of the requested book in the inventory. Based on this, the librarian reviews and either approves or rejects the request. Finally, the system notifies the user about the request status. Thus, the DFD helps in clearly understanding the flow of information and ensures an efficient and organized library management process.

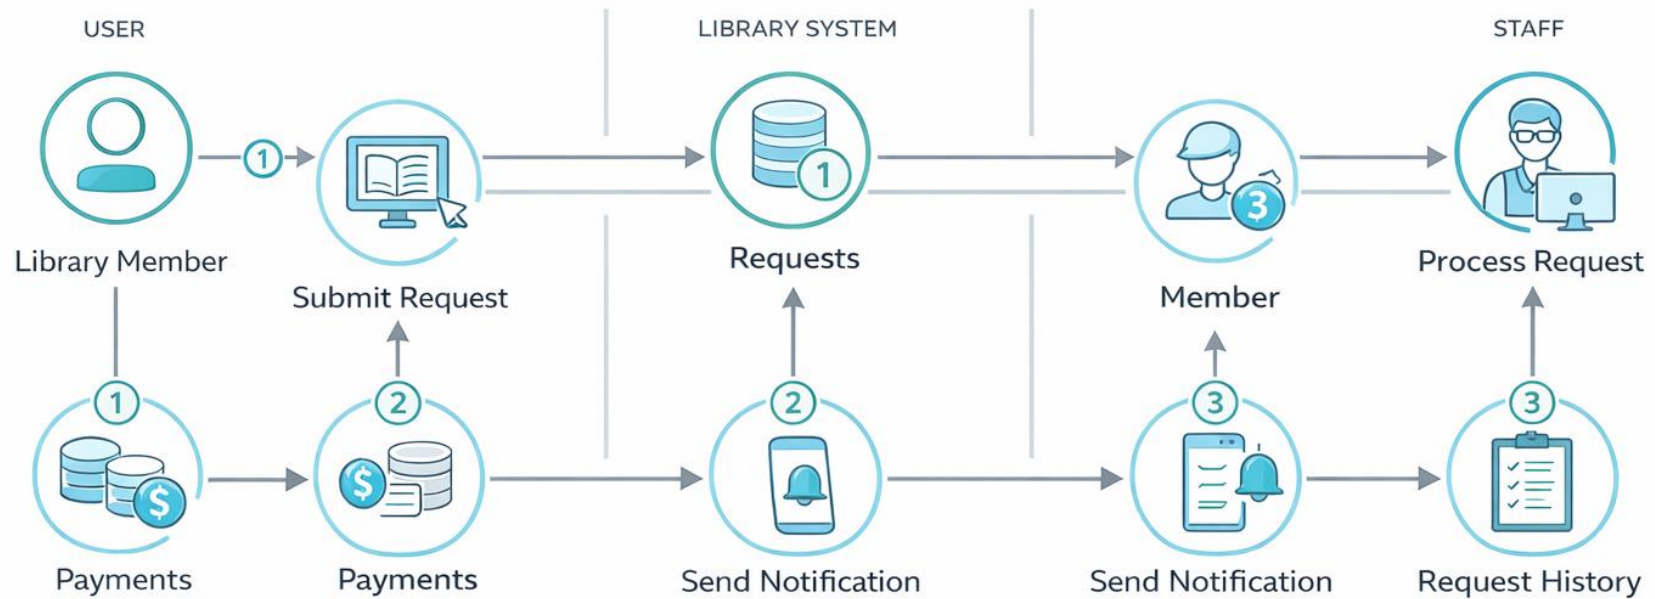

Example: DFD Level 0

Smart Library Request Workflow

Flow

Smart Library Request Workflow

1. Library member submits a request to the library system.
2. Payment is made if required by the request.
3. Library system processes the request and send sends notifications.
4. Library staff reviews and fulfills the request.
5. Request history is updated and accessible for future reference.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register using email and password.	User can successfully create an account and access dashboard.	High	Sprint-1
		USN-2	As a user, I receive a confirmation email after registration.	User receives email and can verify account.	High	Sprint-1
		USN-3	As a user, I can register using Google account.	User can sign up/login via Google.	Medium	Sprint-1
		USN-4	As a user, I can register using social media (Facebook).	User can access account through Facebook login.	Low	Sprint-2
	Login	USN-5	As a user, I can register using social media (Facebook).	User can securely log into the system.	High	Sprint-1
