Problem – Solution Fit Template:

The Smart Library Request Workflow solves the problem of manual and slow library requests by providing an online system where users can request books and track their status easily. This improves efficiency, speeds up the process, and ensures better management of library operations.

Purpose:

The purpose of the **Smart Library Request Workflow** is to solve common issues in traditional library systems by providing a simple and efficient digital solution. It improves the user experience by enabling easy book requests, real-time tracking, and faster approvals. The system uses familiar online platforms to increase adoption and ensures better communication through notifications and updates. It also helps build trust by reducing delays and improving transparency. Overall, it enhances library operations by understanding current challenges and delivering a more effective and user-friendly system.
