| Project Name  | Smart library request workflow |
| Maximum Marks | 4 Marks                        |

### Solution Architecture:

A smart library request workflow solution architecture integrates Internet of Things (IoT) sensors, Radio Frequency IDentification (RFID) technology, and Software-Defined Networking (SDN) to automate book borrowing, returning, and member authentication. This approach often replaces manual, labor-intensive tasks with automated systems, improving efficiency, accuracy, and scalability.
